

WEBSITE FINAL POLISH

Antigravity Changes + Ready-to-Paste Prompt

Project: AI Business Automation Startup

Website: ai-automation-startup.vercel.app

Prepared for: Piyush & Harshad

Goal: Make only the final credibility and wording improvements. The website is already strong enough for customer discovery. Do not rebuild it or start another large redesign.

1. FINAL CHANGES TO MAKE

Change 1 — Remove “Guaranteed Focus”

This appears under the four core pillars and looks like leftover/template copy. Remove “Guaranteed Focus” completely wherever it appears.

Change 2 — Make integration wording honest

Current style of wording: “We connect seamlessly with the tools your team already uses daily...”

Replace with: “We design automation around the tools your team already uses — including ERP, CRM, spreadsheets, email and custom systems.”

Change 3 — Remove absolute “zero disruption” promise

Current style of wording: “Zero system disruption — we integrate around your current tools.”

Replace with: “Designed around your current tools — without forcing a complete system replacement.”

Change 4 — Add an authentic early-stage customer-discovery section

Add a compact section, without making the page longer than necessary:

WE'RE NOT BUILDING IN A VACUUM.

We're currently speaking with businesses to understand where repetitive digital work consumes the most employee time.

Tell us about one workflow that drives your team crazy.

CTA: **SHOW US YOUR WORKFLOW** →

Change 5 — Preserve the current strengths

Do not remove or weaken: the main hero message, human-in-the-loop positioning, custom workflow concept, workflow network, interactive workflow demo, “Start With One Workflow” section, assessment form, or the overall dark premium visual identity.

Change 6 — No unsupported claims

Do not add customer counts, testimonials, logos, revenue, accuracy percentages, time-saved numbers, awards, guarantees or claims that imply completed integrations unless they are actually true.

2. DESIGN / UX CHECK

- Keep the existing premium dark B2B technology aesthetic.
- Keep the dynamic workflow/tree network subtle and readable.
- Do not add excessive neon, glassmorphism, 3D effects or distracting animation.
- Make sure all CTAs remain clear and functional.
- Check the contact form for layout and usability.

- Check mobile widths and prevent horizontal scrolling.
- Respect prefers-reduced-motion.
- Run lint and production build after the changes.

3. READY-TO-PASTE ANTIGRAVITY PROMPT

Improve the EXISTING AI Business Automation startup website with ONLY the final credibility, wording and UX polish described below. IMPORTANT: - Do NOT rebuild the website. - Do NOT redesign the entire site. - Do NOT delete existing good sections. - Do NOT replace the current architecture. - Do NOT add unnecessary dependencies. - Make minimal targeted changes. - Preserve all currently working functionality. - This is the FINAL POLISH pass before customer outreach. OUR STARTUP: We discover repetitive business workflows and design automation around the company's actual process. Core philosophy: "WE DON'T REPLACE PEOPLE. WE AUTOMATE THE REPETITIVE WORK AROUND THEM."

===== 1. REMOVE "GUARANTEED FOCUS"

===== Find every occurrence of: "Guaranteed Focus" Remove it completely. It looks like leftover/template copy and should not appear anywhere on the website.

===== 2. FIX INTEGRATION CLAIM

===== Find wording similar to: "We connect seamlessly with the tools your team already uses daily..." Replace it with: "We design automation around the tools your team already uses – including ERP, CRM, spreadsheets, email and custom systems." IMPORTANT: Do not imply that we already have completed integrations with every listed platform.

===== 3. FIX "ZERO SYSTEM DISRUPTION"

===== Find wording similar to: "Zero system disruption – we integrate around your current tools." Replace it with: "Designed around your current tools – without forcing a complete system replacement." Do not make absolute guarantees.

===== 4. ADD AUTHENTIC CUSTOMER-DISCOVERY SECTION

===== Add a compact section in an appropriate location, preferably before the final CTA/contact area. Headline: "WE'RE NOT BUILDING IN A VACUUM." Body: "We're currently speaking with businesses to understand where repetitive digital work consumes the most employee time." Then: "Tell us about one workflow that drives your team crazy." CTA: "SHOW US YOUR WORKFLOW →" Make this visually consistent with the existing website. Do not claim that we already have customers.

===== 5. PRESERVE EXISTING GOOD WORK

===== DO NOT remove or weaken: - existing hero headline - human + AI positioning - human approval / gatekeeper concept - custom workflow positioning - dynamic workflow network - interactive workflow demo - Start With One Workflow section - current workflow assessment contact form - existing navigation - existing responsive behavior - dark premium visual identity

===== 6. NO UNSUPPORTED CLAIMS

===== Do not add: - fake customer logos - fake testimonials - fake statistics - fake accuracy percentages - fake hours saved - fake revenue - fake awards - guarantees - claims of existing enterprise integrations unless actually implemented Use credible, early-stage language.

===== 7. VISUAL QUALITY CHECK

===== After making the targeted changes: - Check typography - Check spacing - Check section transitions - Check CTA alignment - Check workflow network readability - Check animation performance - Check mobile layout - Check for horizontal overflow - Check prefers-reduced-motion - Check console errors Do not add flashy effects just for appearance.

===== 8. VERIFY

===== Run: npm run lint Then: npm run build Both must finish successfully. If there are errors caused by your changes, fix them. IMPORTANT: Do not make additional redesigns after these changes. This is a final polish pass. At the end, give me: 1. files changed 2. exact changes made 3. lint result 4. build result 5. anything I should manually check before deployment.

4. AFTER ANTIGRAVITY FINISHES

Do **not** immediately give it another large prompt. First review the website locally, then push the finished changes to GitHub and let Vercel deploy them.

Recommended sequence:

Antigravity change → local review → mobile review → git add/commit/push → Vercel deployment → live-site review → freeze website → start company outreach.

5. STARTUP PRIORITY AFTER THIS

Website polishing is no longer the main job. Once this pass is complete, shift the majority of your effort to customer discovery: contact companies, collect workflow information, identify repeated pain points, and find the first narrow automation problem worth building.

Target: 10 companies → conversations → workflow data → repeated problem → MVP → pilot → measurable result.
