

PUNE BUSINESS PROSPECT LIST

Customer Discovery for AI Business Automation Startup

Prepared for: Piyush & Harshad

Purpose: A starting list of Pune-area businesses where repetitive digital workflows may be worth investigating. These are **prospects, not confirmed leads or customers**. The goal is research and workflow discovery — not immediate selling.

Target: Contact 10 companies, aim for 1–3 conversations, observe at least one real workflow, and identify a repeated problem worth building.

1. Priority Companies

#	Company / Industry	Public contact	Why investigate + possible workflow
1	CargoLink Express Logistics LLP Logistics / Warehousing	info@cargolink.in; aditya@cargolink.in	Strong candidate because its public materials describe warehousing, inventory tracking, picking/packing, returns, labelling, COD/payment services and documentation. Possible: Shipment emails, returns, warehouse records, documentation, customer notifications.
2	KATHAT LOGISTICS PRIVATE LIMITED Courier / Freight / E-commerce	kathat.logistics@gmail.com	Courier, freight, cargo storage and e-commerce fulfillment suggest repetitive coordination and documentation. Possible: Shipment tracking, delivery exceptions, customer enquiries, COD, fulfillment.
3	Ncube Logistics Solution India Pvt Ltd Logistics / Supply Chain	info@ncubelogistics.in	Logistics and supply-chain operations can involve high-volume status, document and coordination work. Possible: Shipment documents, status updates, customer communication, data entry, reports.
4	Sahyadri Industries Manufacturing / Industrial	info@sahyadriindustries.co.in	Manufacturing can contain repetitive quotation, purchase, quality, production and inventory workflows. Possible: POs, quotations, production reports, quality documents, inventory, vendor communication.
5	Abhi-Tech Group Manufacturing / Engineering	support@abhitechgroup.com	CNC machining, die casting, fabrication and assemblies may create document-heavy coordination workflows. Possible: RFQs, quotations, POs, production updates, quality documents, customer communication.
6	Sharp Engineers Manufacturing / Precision Engineering	response@sharpendineers.net	Precision engineering may involve repeated RFQ, documentation and production coordination. Possible: RFQs, quotations, drawings/documents, production updates, quality records.
7	CTR Manufacturing Industries Private Limited Manufacturing	Verify official contact before sending	Manufacturing is worth investigating for repetitive internal operations and data handoffs. Possible: Orders, purchasing, production reports, inventory, quality, documentation.
8	Gadiya Industries Pvt. Ltd. Manufacturing	Verify official contact before sending	Industrial manufacturing may contain repetitive quotation, procurement, production and reporting tasks. Possible: RFQs, POs, production records, inventory, customer communication.
9	Pune Industrial Distributors Private Limited Industrial Distribution	Verify official contact before sending	Distribution businesses often handle repetitive orders, quotations, invoices and customer/vendor coordination. Possible: Order entry, quotations, invoices, stock checks, follow-ups.
10	Amit Distributors Wholesale / Distribution	Verify official contact before sending	Distribution workflows are useful for investigating order processing, inventory and communication bottlenecks. Possible: Orders, stock, invoices, customer/vendor communication.
11	Peeyu Distributors Wholesale / Distribution	Verify official contact before sending	Wholesale distribution can contain repetitive order, stock, invoice and coordination processes. Possible: Order processing, inventory checks, invoices, communication, reporting.

2. Questions to Ask

Ask about the work, not whether they want AI.

- What repetitive computer work do employees perform every day?
- Which task takes the most time?
- What information is repeatedly copied between systems?
- Do you process many emails, PDFs, orders, invoices or forms?
- Which process causes the most mistakes or delays?
- Which task would you most like to stop doing manually?
- How many people are involved and how often does it happen?
- What software is involved — ERP, CRM, Excel, email, accounting software?
- Can we watch one example from beginning to end?

3. Suggested Outreach

Subject: Quick question about repetitive workflows at [Company Name]

Hello,

My name is Piyush, and I am a third-year engineering student working with my friend Harshad on an early-stage project focused on business process automation.

We are researching how companies handle repetitive computer-based work such as processing emails and enquiries, transferring data, handling orders and returns, processing documents/invoices, updating ERP/CRM systems and preparing reports.

We are not trying to sell anything at this stage. We want to understand real business workflows before building anything.

Would someone from your team be willing to spend 15–20 minutes with us for a short conversation about which repetitive processes take the most time?

4. Workflow Recording Sheet

Field	Record
Company	
Person / Role	
Workflow	
Input	Email / PDF / order / form / message / etc.
Steps	1 → 2 → 3 → 4 → ...
People involved	
Frequency	Per hour / day / week

Time spent	Per case and per day
Systems	Email / Excel / ERP / CRM / database
Pain level	1–5
Errors / delays	
Potential automation	
Human approval needed?	
Potential ROI	Hours / cost / time saved

5. How We Choose the First MVP

Score each discovered workflow on:

- **Frequency** — how often it happens.
- **Time cost** — employee hours consumed.
- **Business impact** — customers, revenue or operations affected.
- **Error cost** — consequences of mistakes.
- **Automation feasibility** — AI + rules + integrations.
- **Risk** — whether human approval can safely control important actions.
- **Repeatability** — whether other businesses may have the same problem.

6. Team Rules

Do not promise to replace employees. Position the startup as removing repetitive digital work so employees can focus on judgment, customers, sales, problem solving and other higher-value work.

Do not build after one interesting conversation. Talk to multiple businesses and look for the same painful workflow appearing repeatedly. That repeated pattern is the best candidate for a scalable product.

7. First-Week Plan

- Contact 10 companies.
- Send personalized emails, not mass spam.
- Follow up once if appropriate.
- Schedule 15–20 minute calls with interested companies.
- Ask permission before observing workflows or requesting documents.
- Never request passwords or confidential customer information.
- Record workflow structure and business pain, not sensitive data.

8. Important Note

Company details and public contact routes can change. Verify the current contact address on the company's official website before sending. Some entries intentionally say 'verify official contact' rather than giving an unverified email. This is a starting prospect list, not a guarantee of availability or interest.

9. The Goal

10 companies → 10 conversations → multiple workflows → one repeated painful problem → narrow MVP → real pilot → measurable result → product.
