Subject	Student Research — Understanding Repetitive Workflows at CargoLink

Hello CargoLink Team,

My name is Piyush, and I am a third-year engineering student working with my friend Harshad on an early-stage project focused on **business process automation**.

We are researching how companies handle repetitive computer-based work such as:

- shipment and customer emails
- order/return processing
- documentation and data entry
- inventory updates
- payment/COD records
- repetitive reporting and coordination

We are not trying to sell anything at this stage. We are trying to understand real business workflows before building our solution.

We would really appreciate **15–20 minutes with someone from your operations/team** to understand which repetitive processes take the most time and where manual work creates delays or errors.

Even a short conversation would be extremely valuable for our project.

Our current project website:
<https://ai-automation-startup.vercel.app/>

Thank you for your time.

Regards,

Piyush
